

POREX® EveraNib™

Writing Nibs for Whiteboard Markers

Features

- High ink flow
- Long-lasting
- Sharp, clear lines
- Smooth feel/application
- Won't fray or mushroom out
- Leak-resistant
- Customizable, 3D shapes
- Increased design possibilities

Patent Pending

Innovative Nibs. Endless Possibilities.

Introducing EveraNib™ writing nib technology – a revolutionary new nib that offers endless possibilities to designers and manufacturers of whiteboard markers.

The industry's first "tri-nib", the EveraNib™ is made of three layers of highly customizable, porous material that won't fray or mushroom out. This unique, staged capillary design allows for high ink flow and sharp clear lines.

EveraNib™ can be molded into a variety of unique 3D shapes, as well as standard wedge, bullet and conical designs. With the billionth piece as robust, durable and long-lasting as the first, EveraNib™ is a reliable and cost-effective choice for your whiteboard markers.

The innovative EveraNib™ design provides a superior user experience. The staged capillary nib produces clean, crisp lines, while our special material formulations ensure a smooth and comfortable writing experience with smooth application.

As the global leader in ink flow management, you can count on Porex for cutting edge solutions for products and applications.
