

# NUBIFORM® COSMETIC APPLICATORS

Nubiform cosmetic applicators are made with a breakthrough elastomeric material that gives cosmetics designers and manufacturers the freedom and flexibility to develop products that meet their specifications and exceed consumers' expectations.

## Evolution by Design

As the next generation in porous elastomeric technology, Nubiform® offers a number of benefits:

### BENEFITS

- 3-D shaping and molding with open-cell structure
- Adjustable pore sizes to match formula viscosity
- Available in a range of colors that won't bleed or wash out
- Optional anti-microbial protection for unparalleled hygiene
- Flow-through technology for flawless application
- Softness and flexibility for maximum comfort with smudge-free performance
- Optional flocking for improved smoothness

Provides freedom,  
flexibility, and control

### Flow-Through

Open-cell structure and a range of pore sizes provide optimized flow-through of product formulations

### Flexible

Nubiform® maintains its flexibility in any shape, making it an attractive alternative to traditional materials.

### Customizable

Nubiform® can be molded into unique, innovative 3D shapes while maintaining an open cell pore structure.

## Developed With You in Mind

With Nubiform®, we've created a revolutionary, new material that maintains its porous structure in both flat sheet and 3D form, enabling optimized flow-through of makeup formulations for products such as eye liner, eye shadow, lip stain, and foundation.

We can produce Nubiform® in a variety of different colors. These colors won't bleed or wash out — giving you a full range of options in developing consumer products.

## Unparalleled Antimicrobial Protection

An optional feature is POREX® Barrier Technology, our antimicrobial protection that prevents microbial growth and kills potentially harmful bacteria. POREX® Barrier Technology reduces the potential for contamination or infection, to achieve a higher level of hygiene.

## A History of Innovation

For more than 50 years, POREX® has been developing advanced porous components — partnering with engineers and designers to create cutting edge solutions to your product and application challenges.
