

POREX® Hydrophilic Fiber Sheet

34436

Parameters	Value
Technology	Fiber
Material	Polyethylene (PE)/Polypropylene (PP)
Property	Hydrophilic
Shape	Sheet
Width	7.087 ± .197 in
Length	3.937 in
Thickness	.0591 ± .0197 in
Density	0.15 g/cc

Description:

Hydrophilic fiber sheet typically used for absorption, filtration, venting and wicking.

Final tolerances for commercial production will be supplied and agreed upon with a *Mutually Understood and Acceptable Specification Document*.

Disclaimer

This standard sample is for evaluation of form, fit, and function to determine product specification requirements for custom products. Please reference the values in our data sheet for specification guidelines of standard products. In Vitro Diagnostic (IVD), medical-surgical and pharmaceutical samples are for investigational use only and subject to specific application, test condition and regulatory requirements.
